#### INTERNATIONAL PRELIMINARY EXAMINATION REPORT

international	application	No.

## PCT/AU00/00248

go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).**  * Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17).	I.	Basis of the report
the description, pages 2,4-9, a soriginally filed, pages , filed with the demand, pages 1,3, received on 75 January2001 with the letter of 25 January2001  the claims, pages , as originally filed, pages , as amended (together with any statement) under Article 19, pages , pages , filed with the demand, pages 10-12, received on 75 January 2001 with the letter of 25 January 2001  the drawings, pages 1-8, as originally filed, pages , filed with the demand, pages , received on with the letter of  the sequence listing part of the description:  pages , as originally filed pages , as originally filed pages , as originally filed pages , received on with the letter of  which the international application was filed, which so therwise indicated under this item. These elements were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item. These elements were available or furnished to the purposes of international search (under Rule 23.1(b)).  the language of a translation furnished for the purposes of international pages which is:  the language of the translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).  With regard to any nucleotide and/or amino acid sequence disclosed in the international application, was on the basis of the sequence listing:  contained in the international application in computer readable form.  furnished subsequently to this Authority in computer readable form.  furnished subsequently to this Authority in computer readable form.  The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.  The amendments have resulted in the cancellation of:  the description, pages  the claims, Nos.  the drawings, sheets/fig.  This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure	1.	
pages 1,3 , received on 25 January2001 with the letter of 25 January2001  the claims, pages , as originally filed, pages , as mended (together with any statement) under Article 19, pages , filed with the demand, pages 10-12 , received on 25 January 2001 with the letter of 25 January 2001  the drawings, pages 1-8 , as originally filed, pages included in the demand, pages , filed with the demand, pages , received on with the letter of the sequence listing part of the description:  pages , as originally filed pages , filed with the demand pages , as originally filed pages , filed with the demand pages , as originally filed pages , filed with the demand pages , the demand pages , received on with the letter of   With regard to the language, all the elements marked above were available or furnished to this Authority in the following language which is:  the language of publication was filed, unless otherwise indicated under this item. These elements were available or furnished to this Authority in the following language which is:  the language of publication of the international application (under Rule 48.3(b)).  the language of the translation furnished for the purposes of international preliminary examination (under Rules 55.2 and/or 55.3).  With regard to any nucleotide and/or amino acid sequence disclosed in the international application, was on the basis of the sequence listing:  contained in the international application in written form.  furnished subsequently to this Authority in written form.  furnished subsequently to this Authority in written form.  The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.  The amendments have resulted in the cancellation of:  the		the international application as originally filed.
pages 1,3 , received on 25 January2001 with the letter of 25 January2001    the claims, pages , as a originally filed,   pages , as a mended (together with any statement) under Article 19,   pages   10-12 , received on 75 January 2001 with the letter of 25 January 2001    the drawings, pages 1-8 , as originally filed,   pages , filed with the demand,   pages , received on with the letter of 10 the sequence listing part of the description:   pages , as originally filed     pages , filed with the demand pages , received on with the letter of 10 the sequence listing part of the description:   pages , as originally filed     pages , filed with the demand pages , received on with the letter of 10 the sequence listing pages , filed with the demand pages , received on with the letter of 10 the sequence in the sequence of 10 the language, all the elements marked above were available or furnished to this Authority in the language which is:   the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).   the language of publication of the international application (under Rule 48.3(b)).   the language of the translation furnished for the purposes of international application, was on the basis of the sequence listing:   contained in the international application in written form.   filed together with the international application in written form.   furnished subsequently to this Authority in written form.   furnished subsequently to this Authority in written form.   filed together with the international application in computer readable form.   The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.   The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.   The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.   The		X the description, pages 2,4-9, as originally filed,
the claims, pages , as originally filed, pages , as are mended (together with any statement) under Article 19, pages , filed with the demand, pages 10-12 , received on 25 January 2001 with the letter of 25 January 2001   the drawings, pages 1-8 , as originally filed, pages , filed with the demand, pages , received on with the letter of   the sequence listing part of the description: pages , as originally filed pages , filed with the demand pages , received on with the letter of   with regard to the language , filed with the demand pages , received on with the letter of   with regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item. These elements were available or furnished to this Authority in the following language which is: the language of publication of the international application (under Rule 48.3(b)). the language of publication of the international application (under Rule 48.3(b)). the language of the translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).  With regard to any nucleotide and/or amino acid sequence disclosed in the international application, was on the basis of the sequence listing: contained in the international application in written form. filed together with the international application in computer readable form. 2. Citations and explanations (Rule 70.7)

This invention relates to a separator for use in marine craft to separate sand /grit from sea water and stop sand from finding its way into the lubricating grooves of the propeller bearing.

None of the citations disclose a separator with a sleeve mounted over a rotating shaft and with the particles and fluid exiting from the same end opposite the inlet. All the citations also require the orientation of the separators to be vertical for separation and collection of particles from the fluid whereas the separator of the invention need not be vertically oriented since the solids are not collected in the separator.

#### A SEPARATOR

#### FIELD OF THE INVENTION

The present invention relates to a separator for separating particles from a fluid.

5

10

15

#### BACKGROUND

In many marine craft, a propeller at the end of a drive shaft extends away from the craft's stern by out rigging via a bearing. The bearing is usually cooled and lubricated by water flowing through channels or grooves which extend through the bearing. When the marine vessel passes through water where sand or grit has been disturbed, the sand/grit particles can find their way into the lubricating grooves of the bearing. These particles are highly abrasive to the bearing, and result in the bearing quickly becoming worn.

There is therefore a need to minimise the amount of sand or other abrasive particles from entering the lubricating grooves of the bearing.

#### SUMMARY OF THE INVENTION

An object of the present invention is to provide a separator for separating particles entrained in a fluid.

20

In accordance with a first aspect of the present invention there is provided a separator for separating particles entrained in a fluid, said separator including:

a sleeve adapted to be mounted over a rotatable shaft for forming a cavity therebetween;

25

an inlet to the cavity;

an outlet to the cavity opposite the inlet; and

means for imparting a centrifugal force on fluid within the cavity, said means operatively connected to the shaft so that, in use, spinning of the shaft creates the centrifugal force,

wherein, in use, a slurry of fluid and particles enters the cavity through the inlet, the particles are caused to separate from the fluid by action of the centrifugal force, the separated particles and fluid leave the cavity via the outlet with the particles tending to be

Preferably, the sleeve is arranged to rotate about its axis relative to the parting means.

Preferably, the outer layer is ejected from a first exit of the outlet. Preferably, the parting means includes a turbulence means for slowing the exit of the fluid carrying the particles from the outlet.

Preferably, the parting means is arranged to be fixed to a bearing.

Preferably, the parting means includes a scoop means for scooping the inner layer of fluid away from the blade to a second exit of the outlet.

Preferably, the scoop means is in the form of a plurality of curved channels. Preferably, the scoop means is provided with a second raceway between the curved channels and the second exit.

15

5

According to a second aspect of the present invention, there is provided a separator and parting means combination, the separating means as defined above and the parting means is arranged to partition an inner layer of fluid substantially devoid at particles from an outer layer of fluid carrying the particles.

20

30

According to a third aspect of the present invention, there is provided a separator, parting means and a bearing combination, the separator and parting means as defined above, the bearing arranged to receive the inner layer of fluid from the parting means.

### 25 <u>DETAILED DESCRIPTION OF PREFERRED EMBODIMENTS</u>

In order to provide a better understanding, preferred embodiments of the present invention will now be described in detail, by way of example only, with reference to the accompanying diagrams in which:

- Figure 1 is a cross sectional side view of a separator in accordance with the present invention;
- Figure 2 is a complete cross sectional end view of the separator as would be seen from the section X-X of Figure 1;

#### **CLAIMS**

The claims defining the invention are as follows:

- 1. A separator for separating particles entrained in a fluid, said separator including:
- a sleeve adapted to be mounted over a rotatable shaft for forming a cavity therebetween;

an inlet to the cavity;

15

an outlet to the cavity opposite the inlet; and

means for imparting a centrifugal force on fluid within the cavity, said means operatively connected to the shaft so that, in use, spinning of the shaft creates the centrifugal force,

wherein, in use, a slurry of fluid and particles enters the cavity through the inlet, the particles are caused to separate from the fluid by action of the centrifugal force, the separated particles and fluid leave the cavity via the outlet with the particles tending to be closer to the sleeve than the shaft.

- 2. A separator according to claim 1, wherein the cavity increases in cross-sectional area along its length from the inlet towards the outlet.
- 3. A separator according to claim 1, wherein the sleeve is frustoconical in shape with the narrow end of the cone at the inlet and a wide end at the outlet, whereby the size of the cavity increases along its length from the inlet to the outlet.
- 4. A separator according to claim 1, wherein said means is in the form of one or more paddles projecting from the shaft into the cavity.
  - 5. A separator according to claim 1, wherein the inlet is of a smaller area than the outlet.
- 30 6. A separator according to claim 1, where in the cavity is of a helical shape.
  - 7. A separator according to claim 6, wherein said helical shape of the cavity acts as

金さの 子名

said means for imparting centrifugal force.

5

10

20

30

- 8. A separator according to claim 1, wherein the outlet includes a chamber at the end outlet of the cavity between the sleeve and the shaft, the chamber arranged to receive a parting means for portioning an inner layer of fluid substantially devoid of the particles from an outer layer of fluid carrying the particles.
- 9. A separator according to claim 1, wherein said outlet includes a parting means arranged to portion an inner layer of fluid substantially devoid of the particles from an outer layer of the fluid carrying the particles.
  - 10. A separator according to claim 9, wherein the parting means is in the form of a blade closely encircling the shaft.
- 15 11. A separator according to claim 9, wherein the sleeve is arranged to rotate about its axis relative to the parting means.
  - 12. A separator according to claim 9, wherein the outer layer is ejected from a first exit of the outlet.
  - 13. A separator according to claim 12, wherein the first exit includes a turbulence means for slowing the exit of fluid carrying particles from the first exit.
- 14. A separator according to claim 9, wherein the parting means includes a scoop for
   25 scooping the inner layer of fluid away from an edge of the blade to a second exit of the outlet.
  - 15. A separator according to claim 14, wherein the scoop is in the form of a plurality of channels in the parting means.
  - 16. A separator according to claim 6, wherein a first raceway is provided between the inlet and the helical cavity.

- 17. A separator according to claim 15, wherein a second raceway is provided between the channels in the parting means and the second exit.
- 5 18. A separator and parting means combination, the separator as defined in claim 1, wherein the parting means parts an inner layer of fluid substantially devoid of particles from an outer layer of fluid carrying particles.
- 19. A separator and bearing combination, the separator as defined in claim 1, the10 bearing arranged to receive fluid substantially devoid of particles from close to the shaft from the outlet of the separator.
- 20. A separator, parting means and a bearing combination, the separator and parting means as defined in claim 18, the bearing arranged to receive the inner layer of fluid from15 the parting means.
  - 21. A separator, parting means and a bearing combination according to claim 19, wherein the bearing is provided with a sieve means on an opposite side of the bearing to the separator.
